

## Technical data sheet

CQ24A-MPL

MP//BUS

# Communicative rotary actuator for zone valves

- Torque motor 1 Nm
- Nominal voltage AC/DC 24 V
- Control communicative
- Snap-assembly of the actuator
- Flow setting variable
- · Communication via Belimo MP-Bus

## **Technical data**

#### Safety notes

• This device has been designed for use in stationary heating, ventilation and airconditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.

- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation
  or aggressive gases interfere directly with the actuator and that is ensured that the
  ambient conditions remain at any time within the thresholds according to the data
  sheet.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- · Cables must not be removed from the device.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features				
Mode of operation	The actuator receives its digital positioning signal from the higher level controller via the MP-Bus and drives to the position defined. Connection U serves as communication interface and does not supply an analogue measuring voltage. Note: Neither a conventional operation with a standard signal nor a parametrisation of signals (e.g. running time) is possible. With the parametrisation devices a functional check can be executed and the MP adress can be assigned.			
Simple direct mounting	Tool-free snap assembly. The actuator can be plugged on the valve by hand (Caution! Just vertical movements). Pins must match the holes on the flange. The mounting orientation in relation to the valve can be selected in 180° increments. (Possible two times)			
Manual override	Click out the actuator and rotate the valve stem with the help of the actuator.			
Adjustable angle of rotation	The angle of rotation of the actuator can be changed by clip in 2.5° increments. This is used to set the maximum flow rate of the valve.			
High functional reliability	The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.			
Flow setting	Adjustable kv-values (C2Q, C4Q) / V'max-values (C2QP(T)) are given in the respective zone valve data sheets.			
	<ul> <li>2-way valve: Remove end stop clip and place at desired position.</li> <li>3-way valve: Remove end stop clip (change-over application).</li> <li>6-way valve: Remove end stop clip (cooling and heating application).</li> <li>After every change of the flow setting by means of end stop clip, an adaptation must be triggered on the modulating actuators.</li> </ul>

# **Electrical installation**

Rotary actuator (ZoneTight), communicative, AC/DC 24 V, 1 Nm, Communication via Belimo MP-Bus

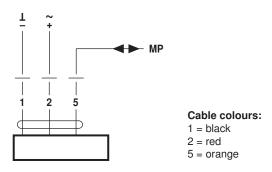

# **Electrical installation**

Notes · Connection via safety isolating transformer. · Parallel connection of other actuators possible. Observe the performance data. 

#### Wiring diagrams

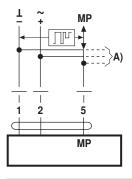

AC/DC 24 V, MPL

#### **Functions**

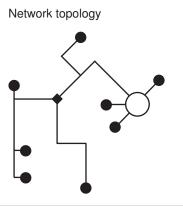

#### Functions when operated on MP-Bus

Connection on the MP-Bus

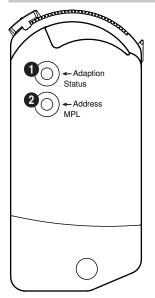

On:

There are no restrictions for the network topology (star, ring, tree or mixed forms are permitted). Supply and communication in one and the same 3-wire cable • no shielding or twisting necessary

no terminating resistors required

# **Operating controls and indicators**

#### Push-button and LED display yellow

Angle of rotation adaptation active Press button: Triggers angle of rotation adaptation, followed by standard mode

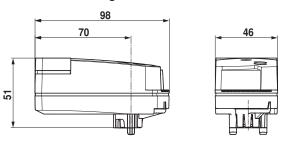

2 Push-button and LED display green		
Off:	No power supply or no MP-Bus level	
Flickering:	MP communication active	
On:	Power supply and MP-Bus level OK	
Flashing:	Depiction of MP address (Command from MP master)	
- continuous:	No MP address set	
<ul> <li>with breaks:</li> </ul>	Pulse in accordance with MP address (e.g. 5 = MP5)	
Press button:	Confirmation of the addressing	

Installation notes	
Be isc if r sw do lev Th ha	Il valves and rotary actuators are maintenance-free. fore any service work on the final controlling device is carried out, it is essential to blate the rotary actuator from the power supply (by unplugging the electrical cable necessary). Any pumps in the part of the piping system concerned must also be vitched off and the appropriate slide valves closed (allow all components to cool wn first if necessary and always reduce the system pressure to ambient pressure vel). ne system must not be returned to service until the ball valve and the rotary actuator ve been correctly reassembled in accordance with the instructions and the pipeline s been refilled by professionally trained personnel.
Service	
Fo	e actuator can be parametrised by ZTH EU via terminal connection. r extended parametrisation the PC tool can be connected. onnection ZTH EU / PC-Tool
